(UV) radiation. UV light is a frequency of electro-magnetic radiation that is higher than the violet spectrum of visible light but lower than x-rays. UV Light Types UV light is divided into three types: UVA, UVB, and UVC. UVA light cannot be seen by humans but can be seen by reptiles. UVB light cannot be seen by humans or reptiles.

### **The Importance of Ultraviolet (UV) Light for Reptiles**

Ultraviolet (UV) light goes beyond visible light, and its light spectrum is divided into three wavelength groups: UVA (long wave ultraviolet light), whose length varies between 320 nm and 4000 nm and is very important for proper development of reptiles. UVB (medium wave ultraviolet light), It is the most important wavelength for reptiles, and its...

(Please note that lighting for captive herps is not as simple as UV-B or no UV-B. Ultraviolet A, the colour rendering index of a light source, as well as the photoperiod or number of daylight hours is

also important. Lighting for herps is quite a complex topic!) Providing UV-B lighting is not as simple as setting up a light and hoping for the best.
