

Ruby Under A Microscope An Illustrated Guide To Ruby Internals

Ruby Under A Microscope An

A microscope (from the Ancient Greek: μικρός, mikrós, "small" and σκοπεῖν, skopeîn, "to look" or "see") is an instrument used to see objects that are too small to be seen by the naked eye. Microscopy is the science of investigating small objects and structures using such an instrument. Microscopic means invisible to the eye unless aided by a microscope.

Welcome to a roundup of Ruby news, articles, videos, and more, for July 2013 cobbled together from my e-mail newsletter, Ruby Weekly. Highlights include: PeepCode acquired by Pluralsight, Practicing Ruby archives made public, Rails 3.2.14, and an interesting interview with Matz.

Ruby Inside: The Ruby Blog

Rubies can be the most valuable colored gemstone, based on price-per-carat. However, there are a lot of fakes out there, and it can be hard to tell if a ruby is real.

4 Ways to Tell if a Ruby is Real - wikiHow

The microscope – A gemologist's best friend . To view inclusions, a microscope is required. In terms of optics, look for a stereo-zoom head with a magnification range from 10–60x (this can be increased with stronger eyepieces and/or a doubling objective lens).

Figure 4. Another blue sapphire showing chalky fluorescence corresponding to the colorless portions of the gem. When seen, this strong chalky blue to green SW fluorescence is an extremely strong indication that the gem has been subjected to high-temperature heat treatment.

UV Fluorescence as a Gemological Tool - Ruby & Sapphire

Connecting a camera to a microscope can be somewhat of a science in itself. There are several solutions. Some of the solutions are quite low-cost, others are DIY home-made solutions, while still other commercial options can be more costly (but may also give you the least problems).

The mineral pyrope is a member of the garnet group. Pyrope is the only member of the garnet family to always display red colouration in natural samples, and it is from this characteristic that it gets its name: from the Greek for fire and eye. Despite being less common than most garnets, it is a widely used gemstone with numerous alternative names, some of which are misnomers.

Pyrope - Wikipedia

Ruby (englisch für Rubin) ist eine höhere Programmiersprache, die Mitte der 1990er Jahre vom Japaner Yukihiro Matsumoto entworfen wurde.. Ruby ist objektorientiert, unterstützt aber mehrere weitere Programmierparadigmen (unter anderem prozedurale und funktionale Programmierung

sowie Nebenläufigkeit), bietet dynamische Typisierung, Reflexion und automatische Speicherbereinigung.

First-ever high-resolution images of a molecule as it ...

Holography: Holography, means of creating a unique photographic image without the use of a lens. The photographic recording of the image is called a hologram, which appears to be an unrecognizable pattern of stripes and whorls but which—when illuminated by coherent light, as by a laser beam—organizes the light

This article provides an overview of synthetic gem materials. Strontium titanate - this colorless manmade material became a popular diamond simulant in the 1950s. However, its dispersion (the optical property that creates fire in a faceted gemstone) is over four times greater than diamond.

An Introduction to Simulants or Imitation Gem Materials

This standard is also applied to imitation diamonds made from cubic zirconia. Although the 58 facet brilliant cut is known as the standard measurement of quality in the cutting industry, there are special instances when deviations are necessary.
