SEEING THE LIGHT: Optics in Nature, Photography, Color, Vision and Holography David Falk, Dieter Brill, David Stork, John Wiley & Sons, New York, 1986, ISBN 0-471-60385-6. One of the classic contemporary texts on optics, although it was written before the digital age hit. But the explanations of the classic optical phenomena are right on, with a wacky sense of humor appearing from time to time.

Powerful optics are best suited to long shooting in open places under good light. They also suggest still targets, deliberate shooting and a requisite for precision, and if a shot's that far and it's so dark I can't see a black reticle, I don't want to take the shot.

Seeing the light: LED optics explained Brian Blank Jan 27, 2010. 0. ... In the case of a narrow optic, there is a SEVERE drop off in light intensity only a few degrees from the central axis. A narrow optic creates a "pencil" of high intensity light, and almost no light is emitted outside of this very narrow beam." ... When secondary ...

Potential uses for supercontinuum generation in nonlinear fiber optics range from medical applications, including non-invasive imaging of live tissues, to all-optical networks, in which light waves, not electronics, perform switching, routing, amplifying and other functions.

Seeing the Light A Close Look at Eighteenth-Century Optics. by James Breig. ... Chester More Hall, a British lawyer, tackled a problem derived from the natural effect of glass on light in optical instruments. As light passed through the lens of a telescope, the colors could be distorted and images blurred. Hall found the right combination of ...

NIR light is inherently sensitive to tissue blood-oxygenation state without exogenous contrast agents. Low NIR tissue absorption permits photons to travel several centimeters deep into tissue (see figure 1). Optical methods can be rapid, noninvasive, portable, and inexpensive.

Optics. Optics is the branch of physics which involves the behaviour and properties of light, including its interactions with matter and the construction of instruments that use or detect it. Optics usually describes the behaviour of visible, ultraviolet, and infrared light. Because light is an electromagnetic wave,...

Light Transmission. It was a very large and very hungry lion, not forty meters from where we sat and sweated. I could hear meat tearing and bones breaking, and an occasional low growl as it dismantled a hapless native cow. I could see nothing, not even the outline of the acacia tree from which the bait hung.

Optical Ghosts. Simply put, lens ghosting (or optical ghosting) is a consequence of the fact that no camera lens in existence perfectly transmits 100% of the light incident upon it. Some of the light is reflected from the back of lens to the front, and then back again, as in the first diagram on this website.
