Through the activity of developing the model and then simulating it, the simulation says, "Based on your model and your set of assumptions, reality is absurd!" Often times the model is grossly incorrect, and other times the model produces great leaps in my understanding of how things actually work, and, quite often contrary to common sense.

Modeling & Simulation - An Introduction

Scientific modelling is a scientific activity, the aim of which is to make a particular part or feature of the world easier to understand, define, quantify, visualize, or simulate by referencing it to existing and usually commonly accepted knowledge. It requires selecting and identifying relevant aspects of a situation in the real world and then using different types of models for different ...

The aim of this article was to provide an overview of Gibbs's reflective cycle (Gibbs, 1988) and its application to debriefing as part of simulation practice. First, we explore the concept of reflection and reflective practice, describe and analyze Gibbs's cycle, and compare how this cycle relates to contemporary debriefing methods.
