In geometry, special right triangles are great to work with because the ratio of their sides will always be the same, making calculations easier. The two special triangles you need to know are the isosceles (or 45-45-90) and 30-60-90 right triangles. You can use your knowledge of special right triangles to answer the following questions.

Special Right Triangles — Practice Geometry Questions ...

Recognizing special right triangles can provide a shortcut when answering some geometry questions. A special right triangle is a right triangle whose sides are in a particular ratio, called the Pythagorean Triples. You can also use the Pythagorean theorem, but if you can see that it is a special triangle it can save you some calculations.

I've looked for the past 20 minutes all over google trying to find help. So I've got a right triangle, one with angle measures of 30-60-90. The hypotenuse is y, the shortest side is x, and the last side is 21. I need help finding x and y, and if you could explain it as simply as possible, that would be fantastic! My geometry teacher wont help me.
