Half-life (symbol  $t_{1/2}$ ) is the time required for a quantity to reduce to half its initial value. The term is commonly used in nuclear physics to describe how quickly unstable atoms undergo, or how long stable atoms survive, radioactive decay. The term is also used more generally to characterize any type of exponential or non-exponential decay. For example, the medical sciences refer to the ...

One little note about my "buy now" button system: paypal keeps track of inventory, which means each frog can only be purchased once. Unfortunately the system has a major flaw: until I manually remove the button after the item has sold, you won't know whether something is still available until you actually CLICK on the button.
