### What is the no solution symbol - answers.com

This is what it means for an equation to have "no solution", there is no value that when substituted for the variable will result in a true statement. I agree with you that the notation does lead to some confusion when dealing with the special case of the solution set being empty.

### notation - When an equation has no solutions, denote it ...

This is a list of mathematical symbols used in all branches of mathematics to express a formula or to represent a constant.. A mathematical concept is independent of the symbol chosen to represent it. For many of the symbols below, the symbol is usually synonymous with the corresponding concept (ultimately an arbitrary choice made as a result of the cumulative history of mathematics), but in ...

From a logical point of view it is quite legitimate to call all symbols of this kind variable symbols, as is customary in mathematical logic (the "domain of variation" of the variable may prove to consist of a single object; it may even be "empty" — e.g. in the case of equations with no solutions).

Real math help. What Does It Mean When An Equation Has No Solution? What Does It Mean When An Equation Has No Solution? Note: Sometimes equations have no solution. This means that no matter what value is plugged in for the variable, you will ALWAYS get a contradiction. Watch this tutorial and learn what it takes for an equation to have no solution.

Purplemath. You never know when set notation is going to pop up. Usually, you'll see it when you learn about solving inequalities, because for some reason saying " $x < 3$ " isn't good enough, so instead they'll want you to phrase the answer as "the solution set is  $\{ x \mid x \text{ is a real number and } x < 3 \}$ ". How this adds anything to the student's understanding, I don't know.

Solving these will involve multiplying through and simplifying, before doing the actual solution process. If you're not comfortable with parentheses, study up first. Then come back here. Then we'll look at the two weird kinds of solutions: "no solution", and the solution that is "all x". The solution process ends in nonsense in the former case ...
