The biggest use of selenium is as an additive to glass. Some selenium compounds decolourise glass, while others give a deep red colour. Selenium can also be used to reduce the transmission of sunlight in architectural glass, giving it a bronze tint. Selenium is used to make pigments for ceramics, paint and plastics.

Selenium - Element information, properties and uses ...

Selenium is used to impart a ruby-red color to glass and to neutralize the green color in glass which is present due to iron content. Selenium is similar to sulfur in its chemical properties. One mineral form of selenium is the compound with lead, clausthalite , $PbSe$.
