Learning analytics aims to analyze data from students and learning environments to support learning at different levels. Although learning analytics is a recent field, it reached a high level of maturity, especially in its applications for higher education. However, little of the research in learning analytics targets other educational levels, such as high school.

Humanities are academic disciplines that study aspects of human society and culture. In the Renaissance, the term contrasted with divinity and referred to what is now called classics, the main area of secular study in universities at the time. Today, the humanities are more frequently defined as any fields of study outside of professional training, mathematics, and the natural and social sciences.

The Western Australian landscape is ancient, heavily eroded and has not been subject to vulcanism or mountain building since the Mesozoic. This has resulted in a relatively stable biogeographic template on which biotic evolutionary processes have occurred, with a steady increase in lineage diversification and a tendency towards short-range endemism in many taxa.
