Writing Linux Device Drivers Lab Solutions A Guide With ...

Overview. Linux has a monolithic kernel. For this reason, writing a device driver for Linux requires performing a combined compilation with the kernel. Another way around is to implement your driver as a kernel module, in which case you won't need to recompile the kernel to add another driver.

Linux Driver Tutorial: How to Write a Simple Linux Device ...

Overview ¶. These files are grouped into the /dev directory, and system calls open, read, write, close, lseek, mmap etc. are redirected by the operating system to the device driver associated with the physical device. The device driver is a kernel component (usually a module) that interacts with a hardware device.

Character device drivers — The Linux Kernel documentation

To build a driver, these are the steps to follow: Program the driver source files, giving special attention to the kernel interface. Integrate the driver into the kernel, including in the kernel source calls to the driver functions. Configure and compile the new kernel. Test the driver, writing a user program.

Writing a Linux Driver | Linux Journal

This lab solution manual (green book) is really a repetition of the wording of the exercises (which are given in Writing Linux Device Drivers - red book) + code for the solutions. The code can already be downloaded for free off the author's web site.
